PROFESSIONAL SUMMARY

Frontend Engineer with 4+ years of experience building production-grade, client-facing web applications using React, Next.js, TypeScript, and JavaScript (ES6+). Proven track record as a sole frontend owner, independently architecting an interactive geospatial search platform for a Fortune 500 logistics and healthcare client, cited by stakeholders as a key driver of customer conversions. Skilled in component-driven architecture, REST API integration, web accessibility (ARIA), and performance optimization, with hands-on experience using AI-assisted developer tools to accelerate delivery.

SKILLS

Frontend & Frameworks: React.js, Next.js, TypeScript, Tailwind CSS

Core Web: JavaScript (ES6+), HTML5, CSS3, Responsive Design, Web Accessibility (ARIA)

State & Data: Redux Toolkit, TanStack Query, REST APIs, Authentication, API Integration, Zod

CMS & Enterprise: Adobe Experience Manager (AEM), Component Development, Multi-locale Implementation

Tools & Practices: Git, Vite, Agile/Scrum, Cross-Browser Compatibility, AI-Assisted Development (ChatGPT, Claude, Gemini, GitHub Copilot)

WORK EXPERIENCE

Experience Engineer L2 | Publicis Sapient | Gurugram, Haryana

Sep 2021 – Present

- Owned end-to-end frontend development for the Logistics Facility Locator Platform, transforming it from a static, pre-rendered tool into a fully dynamic, interactive geospatial search application.
- Engineered advanced search functionality with debounced queries, fallback-to-geocoding for unmatched locations, 100-mile radius-based facility matching, geolocation, and real-time autosuggestions.
- Built using Google Maps integration with dynamic marker rendering and a detail panel UI.
- Cited by client stakeholders as a primary driver of customer conversions and revenue for the platform.
- Localized and deployed the platform across 62 global locales using AEM, building reusable locale-aware components and dynamic navigation structures.
- Implemented accessibility best practices using ARIA attributes, ensuring usability across assistive technologies and cross-browser environments.
- Drove a platform migration from OpenText C2 to OpenText D2, rebuilding the project environment from scratch and restructuring code to meet D2's specifications while preserving full functional parity with the original C2 implementation.
- Migrated a custom component from OpenText D2 to AEM as part of a broader Adobe-led platform migration, re-configuring code and specifications to ensure complete functional accuracy on the new platform.

PROJECTS

OrbitShop | E-Commerce Platform | [Live](#) | [GitHub](#)

- Built a full-featured e-commerce platform with product listings, search, cart, wishlist, and a complete checkout workflow.
- Implemented Google OAuth authentication via Firebase, persistent cart/session state, and a light/dark theme switch.
- Modular, component-driven architecture with React Router for multi-page navigation and a fully responsive Tailwind UI.

Tech Stack: React, Redux Toolkit, React Router, Tailwind CSS, Firebase

OpenAero | Interactive Weather Map | [Live](#) | [GitHub](#)

- Real-time weather visualization app with an interactive Leaflet map (MapTiler tiles), click any location to view live conditions.
- Displays 7-day daily forecast, 48-hour hourly forecast, AQI, and live filters for temperature, precipitation, and wind.
- Feature-first architecture using TanStack Query for async state/caching and Zod for runtime API response validation.

Tech Stack: React, TypeScript, TanStack Query, Zod, Leaflet, MapTiler

EDUCATION

Bachelor of Technology, Computer Science & Engineering

Neotia Institute of Technology Management & Science, Kolkata, West Bengal | August 2013 - June 2017

ACHIEVEMENTS

- Recognized with the "Learning Mindset Award" at Publicis Sapient for proactive upskilling and applying modern frontend technologies to production work.
- Led two independent platform migrations, from OpenText to AEM and across subsequent environment upgrades, ensuring zero functionality loss while transitioning the entire production application.
- Identified and resolved critical accessibility gaps by implementing core ARIA-based accessibility functionality on a previously non-compliant production platform.
